Release Notes are a general description of the fixes and features implemented in a particular version. For complete details, please see our User Guide.

1: Release Notes for Version 1.2.0 (Build 9703)

Unlocked for up to full raster 4K resolutions

2: Release Notes for Version 1.1.0 (Build 9466)

Update user manual.

3: Release Notes for Version 1.1.0 (Build 9462)

Enable processing of image resolution up to 2048x2048. Added enhanced notifications when video is not denoised due to the size limitations, a message box notification when Anti-Matter is added and the video is watermarked with a notification it has not been denoised.

Updated watermarking on trial versions of the software. Enhanced watermarking, changed image to refer to DarkEnergyForAdobe.com.

Fixed denoise processing when video is scaled in the viewport. Video is now analyzed and denoised at full resolution and then scaled to the viewport resolution, giving the best possible denoised scaled result.

4: Release Notes for Version 1.0.0 (Build 9388)

Fixed intermittent error "After Effects error: Unknown exception (4) (25 :: 60)" when adding Anti-Matter plug-in.

5: Release Notes for Version 1.0.0 (Build 9356)

Fixed crash when analyze scenes without enough lumance.

6: Release Notes for Version 1.0.0 (Build 9354)

Due to the nature of noise and the algorithms that we use to remove the noise the Anti-matter plug-in only processes frames that at full resolution. Processing video that has been down sampled causes sub optimal noise removal not representative of the full capabilities of Anti-Matter. When the preview mode is set smaller then 100% the Anti-Matter plug-in does not process the noise in the video frames, in these cases a message is displayed in the info window.

Fixed issue where Anti-Matter was retaining effects of effects that where stacked in front of it.

Restricted video processing to HD resolution.

7: Release Notes for Version 1.0.0 (Build 9352)

Added support for Adobe After Effects 6.0. Plug-in is now installed as an After Effects 6.0 plug-in if After Effects 6.0 is installed.

Fixed issues with installer if Code Meter is not already installed.

8: Release Notes for Version 1.0.0 (Build 9347)

Autokey frame mode compatibility. The Anti-Matter plug-in parameters are all marked to use hold style interpolation, So that your noise removal settings are not interpolated between keyframes. . After Effects Auto-Keyframe mode, which is intended to automatically drop keyframes when a parameter value is changes, does not automatically drop keyframes for parameters that default to hold style interpolation. As a result Auto-Keframe mode does not work with the Anti-Matter plugin. Release Notes are a general description of the fixes and features implemented in a particular version. For complete details, please see our User Guide.
